

## PENDING PRODUCTS

© 2004 Smart Shipper LLC

We are always looking to improve and expand our current product lines, as well as develop new lines of products. We are particularly excited about a couple of new lines on the near horizon.

### EXPRESS SHIPPER PLUS LINE

These are expanded polystyrene disposable containers with a "plus". We are currently in final testing for a line of eps containers with an additive that seems to perform much better than standard eps containers. Yet, cost should not be too much higher.

### SMART REFRIGERANT LINE

In all of the testing we have done on our many designs, we have used many brands of gel packs and phase changes materials as well as wet and dry ice. We have found many shortcomings to all. Therefore, we have developed some of our own. There are several different products that we have developed in order to fill our needs. We know that these are useful to our customers as well. They are each at various stages in testing right now. But, we will have some of these available in the near future.

## Smart Shipper

*Insulated shipping  
containers.*

*Keeping your product  
colder... longer!*

Savings Example:

You ship 25 # of product from Cincinnati, OH to Las Vegas, NV, the total cost, shipping, gel packs and cooler would be about...

*15 # gel packs, \$6 eps cooler,  
overnight.....cost \$191*

*5 # gel pack, \$3 per use cost of Smart Shipper,  
3 day shipment.....cost \$125*

**YOU SAVE \$66 with  
Smart Shipper!**

*Is that \$6 eps cooler really cheaper?*

# SHIPPING COLD? SOLUTION: SMART SHIPPER.

We are a full line insulated shipping container manufacturer. Our containers have been tested by two of the three largest carriers in the world, as well as the U. S. military. They have surpassed the competition in thermal testing as well as durability testing. As a matter of fact, we are the only company of which we are aware, with a reusable container, with an integrated computer for monitoring which has passed ISTA style drop tests.

## CURRENT PRODUCTS

### SMART SHIPPER LINE

First, the Cadillac, our Smart Shipper line. These are durable, reusable shipping containers which have been laboratory tested as well as test shipped, and under certain circumstances shown to keep

products within tolerance for OVER A WEEK! Sometimes, ten plus days!

The Smart Shipper line currently consists of four products, in two sizes.

The Smart Shipper 1000, has an internal capacity about 1000 cubic inches. It is available with the integrated TiMan computer monitoring system option.

The Smart Shipper 500, has an internal capacity of about 500 cubic inches. It is also available with the integrated TiMan computer monitoring system option.

The **TiMan computer monitoring system** is an integrated computer which monitors and logs shipping data, such as, shipping start time and date, end time and date, time and date each time the container is opened or closed (i.e. customs check, or tampering), as well as giving you an hour by hour log of the temperature inside your container so that you know your product arrived in good condition.

### THERMO SHIPPER LINE

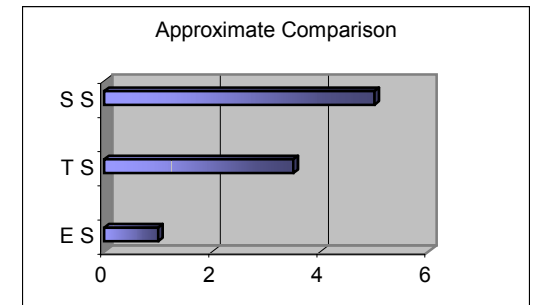

These are our best disposable containers. They are not as durable as the Smart Shippers; however, they do contain a similar vacuum insulation. They test at shorter shipping times than the Smart Shipper, but do a much better job than eps shippers. Therefore, these containers can be used for multiple day shipments. These are designed for one time use.

They are currently available in seven different sizes ranging from approximately 160 cubic inches of cargo/refrigerant space to a whopping 7100 cubic inches of cargo/refrigerant space.

### EXPRESS SHIPPER LINE

These are expanded polystyrene disposable containers. These are comparable to the containers used by 95% of those shipping perishables today. As with any normal eps container they are recommended only for overnight shipments, and in hot weather no ones normal eps containers are effective. Therefore, a Thermo Shipper or Smart Shipper would be recommended.

Currently these are available in three sizes.

*Under similar shipping conditions, our testing has shown the above chart to be a representative comparison of days.*
